

# Shapes!

This exercise will be one where you'll learn to create shapes. Here's the secret. When you click around, and then move over the same point you started at, you'll get a little circle next to the pen tool. That means it's going to "close" the object when you click there. This will automatically end the path and allow you to start a new shape. So in the area below, start at any corner and click through the corners to draw the shapes. Click on the point you started to close the shape and begin the next shape. I also threw in some shapes that need to be drawn with individual lines so you can practice those, too. Remember- you'll have to control click on the canvas to end those lines.

SET THE STROKE TO RED 4 POINT LINE WITH NO FILL TO COMPLETE THE EXERCISE.
